

national science week 2025

25th June 2025

Dear Parents and Caregivers of St Therese's Students,

In Week 5 of Term 3, Tuesday 12th August at 6pm, St Therese's will be celebrating National Science Week. This year we are hosting our annual Science Fair. Students and their families are welcome to participate in the Science Fair or come and experience the Science Fair as a spectator.

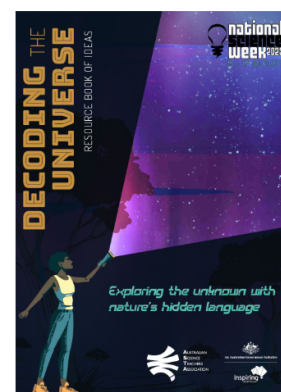

Science Fairs provide many benefits to all students, which encourage their educational and even social development. One of the most valuable benefits is the chance to show, explain, and talk about their projects to others.

Science fair participants are to:

- Create their own learning experiences and innovations, just as scientists do in the real world.
- Design display boards to communicate the stories of their science projects.
- Participate as a community and support and encourage their fellow students at the fair.
- Learn from other students.
- Interact with adults and improve presentation skills by answering questions from visitors.

Students who are interested in participating in the Science Fair **must** fill in the attached registration form and hand it to the office before **Tuesday 29th July**. No entries will be considered after this date. These registrations are essential to ensure all safety requirements can be met. **Please note fire, accelerants, toxic chemicals and explosives are not prohibited.**

This year's National Science Week theme is "*Decoding the Universe – Exploring the unknown with nature's hidden language*". Entries are not limited to this theme, all safe science experiences are welcome to showcase.

Kind Regards,

Gwen Hobbs
